Registration

Free and open to the public

History

The rich, black soils of Huron County, Ohio, are perfect for OARDC's Muck Crops Station – the oldest location among the outlying stations. It is here, in the heart of fresh market vegetable country, that Ohio State scientist study radishes, parsley, cilantro, green and bulb onions, and many other leaf and root crops. The soil here is almost 45 percent organic matter, whereas most mineral soils only have 3 to 5 percent organic matter.
